## PROJECT

### Online Doctor Appointment System

Developed a web platform enabling patients to book, reschedule, and cancel appointments with registered doctors. The system includes three panels: Patient (booking), Doctor (appointment management), and Admin (data control).

### Invoice Management System

Developed a full-stack invoice processing system using React and Tailwind CSS for a responsive frontend, with Node.js, Express.js, and MongoDB powering the backend. The system enables efficient billing, tracks pending invoices, and offers a user-friendly interface for managing financial records.
